Phoenix  
**Recover™ Pro** 2004

## A secure, easy-to-deploy, easy to use backup and recovery solution for PC's

Virus attacks and other disasters affect small and medium sized businesses (SMBs) just as severely as they do large enterprises. Over 60% of business-critical content and applications reside on employees' machines, not on a server. Businesses need to plan to enable non-technical employees to immediately recover from a virus attack, accidental deletion, or an unwanted software upgrade or patch. Recover Pro 2004 was created specifically to provide SMBs with a secure, complete, and powerful backup solution that is easy to deploy and use and eases the burden on IT service and support.

**Today, PCs are increasingly threatened by new viruses every second.** Add to that spy ware, pop-up ware, accidental file deletion, and an unwanted software upgrade or patch. When a PC becomes more of a maintenance issue than a productivity tool, Recover Pro 2004 offers a quick and fast way to return to a previously "good" state before the system started having problems.

Recover Pro 2004 is a secure, easy-to-deploy, easy to use backup and recovery solution for PCs. Recover Pro 2004 is a new, advanced application that ensures users can recover their applications and data quickly and easily in the case of a virus attack, accidental file overwrite, or Windows failure. Even if Windows won't boot, a quick recovery is just three clicks away with Recover Pro 2004's pre-boot environment and on board, protected backup. There is no backup CD required.

The Recover Pro 2004 application ensures easy compliance with a company's data protection policy and allows companies to reduce downtime of systems and loss of intellectual property due to spyware, adware and viruses that cause system crashes.

### **Recover Pro 2004 is a new backup and recovery solution that automatically protects a PC's data, applications and OS.**

- Makes the computer work the way it was - even if the operating system fails
- Reduced down time
- Low cost by leveraging the PC, no additional hardware required.
- Easy installation and usage

Recover Pro 2004 levels the IT playing field for SMBs, which often have limited IT staff, but need to respond to system failures caused by virus attacks, accidental file deletion, or an unwanted software upgrade or patch. SMBs can use Recover Pro 2004 to restore and repair their systems. Recover Pro 2004 provides tamper-resistant and automatic scheduling of backups, complete data and system recovery without CDs or downloads, and hassle-free protection of user data, network settings, and operating system files even if Windows won't boot. Recover Pro 2004 provides simple installation and usage, without substantial up-front financial investment or additional infrastructure. Recover Pro 2004 is the optimal solution for SMBs.

**Protected Backups** — in a tamper-proof backup space, protected even from viruses that compromise the entire Windows operating system and user data

**Always Available Recovery** — anytime, anywhere even if Windows won't boot, or if the PC is not connected to a network, or the user has no recovery CDs

**Affordability** — low cost, complete application that does not require additional hardware or training

**Recover Pro 2004's pre-OS environment is powered by Phoenix cME Console 2004 that provides the following capabilities:**

- Protected Pre-OS Workspace
- cME Guardian: Monitors and protects the integrity of backups and Recover Pro 2004
- Phoenix cME Intelligent, Connected Platform Services

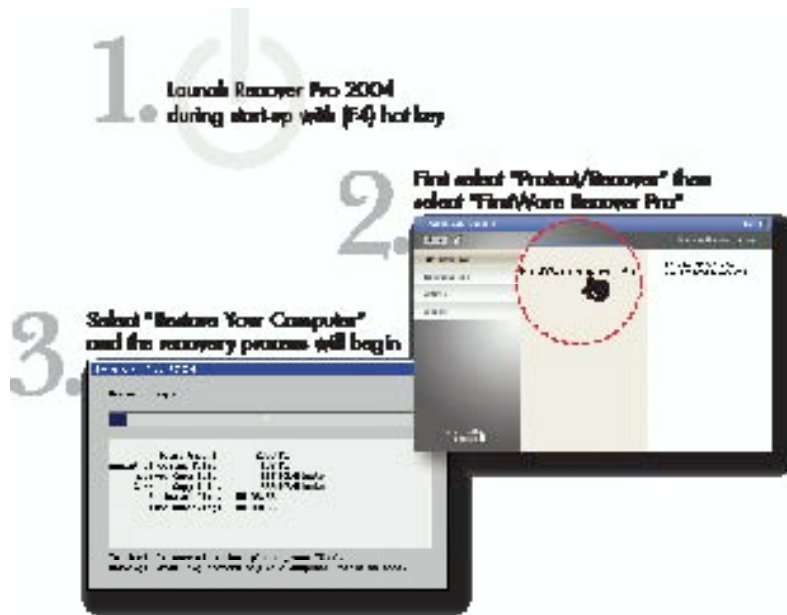

**Phoenix delivers a complete pre-OS trusted, intelligent applications environment and protection/productivity suite**

Phoenix cME Console 2004 is the cornerstone software platform ensuring that the Phoenix Core Managed Environment (cME) functions securely, reliably, and flexibly and delivers incremental revenue for your business

Phoenix FirstWare and cME Partner Applications provide value-added management and recovery tools that deliver must-have differentiation for OEMs and system builders

Phoenix TrustConnector is an easy-to-install trusted computing software that enables seamless, built-in PC and x86 device authentication to IP networks

Recover Pro 2004 allows quick and easy data recovery following a virus attack, system crash, even accidental file deletion. In a few minutes with just three simple steps PC users can restore their hard drive back to any point in time when their computer was functioning properly, without the costly assistance of tech support.
