# Phoenix Recover Pro™ 6

## One-Button PC Recovery... When Windows Won't Boot

Recover from  
Windows® Crash

Instant PC System Restore

Bulletproof, Self-contained  
Recovery Environment

CD-free Restore Services

Easy Backup to External  
Storage Locations

### **Instant Recovery From Complete System Failure**

Repairing a damaged system can take hours and there's no guarantee your user's PC will be restored to the condition it was in before the disaster occurred. Most PC failures result from damaged or corrupted system files. These are often a direct result of a virus or malware attack, an incompatible software installation, or other software problem. Matters are made worse when your user can't boot even into Windows. Phoenix Recover Pro™ 6 solves this problem, ensuring immediate, one-button system recovery – even when Windows won't boot. Recover Pro is your ticket to reduce support costs, improve business productivity, and create lasting user satisfaction.

### **Full Protection out of the Box**

Most recovery products rely on the presence of a previously-created static backup image, and recovery CDs when Windows won't boot. Recover Pro's unique restore capability is completely self-contained and does not require your users to initiate anything. Once installed, you have the assurance of being able to restore their PC to a previously known working state, without CD/DVD recovery media or network connectivity – even when Windows won't boot. This is a significant benefit for your mobile users and others who don't have access to these external resources.

### **Easy, Self-contained Recovery**

Recover Pro 6 was designed from the ground up to make recovery fast and easy-to-use, even for non-technical users. But don't let Recover Pro's simplicity and intuitive recovery interface overshadow its powerful capabilities.

Recover Pro 6 offers multiple backup options for the advanced user:

- Automatically or manually create Quick backups. These provide multiple "undo's" for your PC hard drive.
- Create optional Complete backups that can be saved to a protected area of your system hard drive, to a second internal drive, a network or USB drive, or to CD/DVD recovery discs.
- Selectively retrieve deleted or overwritten files, and even choose which version to restore to.

### More Secure Recovery Environment

Recover Pro 6 offers unparalleled security because the actual recovery data is stored in a self-contained area of the hard drive within the Phoenix Instant-On recovery environment. This environment is completely operating system independent. It is not vulnerable to Windows attacks, but can be accessed from a Windows interface or from a hot key when Windows won't boot. Only the Recover Pro application can write to this area, because our bulletproof recovery environment is constantly monitored and maintained.

### Best PC Recovery Solution

Virus attacks and other disasters are on the rise, and strike organizations of every size. More than 60 percent of business-critical data and applications reside on employee notebook and desktop PCs, not on company servers. Recover Pro 6 reduces IT support costs, increases employee productivity and ensures that employee data is safe and secure.

#### Instant Recovery

Recover entire system after a virus or malware attack, corrupted installation, or Windows failure. Completely restores operating system, applications, configurations, settings, and data files to a known good condition.

#### Works when Windows won't boot

The Phoenix Instant-On recovery environment is OS-independent, and can restore your user's computer even in the event of a full Windows boot failure.

#### Self-contained Recovery

Built-in recovery environment. No recovery CD/DVD or network access needed.

#### Backup to External Sources

Optionally create full backup images of your hard drive that can be stored on a second ATA/SATA internal drive, a network/USB drive, or bootable recovery CD/DVDs.

#### Recover Deleted Files

Instantly retrieve overwritten or deleted files. Restore a previous revision of a file.

#### Secure Recovery Environment

Recovery data is stored in a secure, Phoenix-protected area of the hard drive not accessible to Windows, and not susceptible to virus and other attacks on Windows.

### Secure from the START

Phoenix Technologies is a global market leader in device-defining software that enables endpoint security from the start. The company first established dominant industry leadership over 25 years ago with BIOS software. From this unique foundation of core level expertise and firmware offering the highest levels of reliability, Phoenix has created a portfolio of innovative software products that simply and easily identify and restore devices, thereby assuring users unparalleled endpoint security and availability.
